"STRONG ALKALINE WATER "

GOOD NIGHT SLEEP: Drink 1/2-1 ounce of pH 11.5 before bedtime to help release melatonin.

- Rinse eyes with an eye cup. Remove the eye cup from its packaging,
- Soak it in Strong Acidic Water (pH 2.5) for 1-2 minutes to clean and disinfect.
- Rinse the eye cup thoroughly with Strong Alkaline Water (pH 11.5)
- Fill the cup, following package directions, with Strong Alkaline Water (pH 11.5). Place the cup firmly around one eye, keeping your eye open, tilt your head back and gently roll your eye as though you were attempting to look up, down, and from side to side. Continue this for approximately 1 minute.
- Now that you have completed one eye, toss the water away. Rinse the eye cup thoroughly with Strong Acid Water (pH 2.5). Repeat steps for your other eye.

CHAPTER II
pH 8.5-9.5 KANGEN Water

Getting Started drinking Kangen Water: It is recommended to start by drinking pH 8.5 water for two weeks. This water is dispensed through the TOP flexible hose.

Drink at least $\frac{1}{2}$ of your body weight in ounces each day.

Athletes, individuals doing physically demanding work and those recovering from sickness are advised to drink at least $\frac{3}{4}$ Kangen water to promote body homeostasis.

Drinking 1 ounce per pound of body weight per day produces real "miracles". It is my observation that those people who drink a minimum of $\frac{3}{4}$ of their body weight in ounces of Kangen water per day see the quickest results.

If you do not experience any "discomfort" you can increase the water pH to 9.0 and drink Kangen pH 9.0 water for two weeks.

If you do not experience any "discomfort" you can increase the water pH to 9.5. Every cell in your body will be grateful for the hydration and healing boost you provide them every time you drink!

*Note frequency of urination should not be considered as "discomfort". Your body is detoxing, it is important to keep drinking to flush out toxins and waste.

CLEANSING SYMPTOMS

These are typically caused by the body releasing stored toxins and acidic waste.

- Headaches
- Skin eruptions
- Loose bowels
- Coughing

If you experience cleansing symptoms on the pH 8.5 water, increase the amount of water you are drinking to help neutralize and flush the toxins from your system.

If you are experiencing these symptoms after increasing the pH of the water you are consuming, then go back to the last pH setting that you were able to drink without experiencing these symptoms and increase the amount of water that you consume until these symptoms stop.

If the reaction gets too severe, one should back off of the pH but **INCREASE** the volume of water ingested.

Replace baby wipes with a container filled with soft or non-bleached paper towels and pH 6.0 Beauty water. To assist keeping the skin hydrated and skin pH balanced, use this to cleanse diaper area every time you change your baby, pat dry and apply a fine mist on the skin.

Step AWAY from Antiperspirant

Sweat is our bodies natural mechanism to continuously release toxins. Stopping this natural process can cause a significant backlash in the lymphatic system. Odors are the byproduct of bacteria thriving in a "dark", damp area.

Instead of Antiperspirant

- Mist with pH 2.5 Strong Acidic water.
- If you tend to sweat a lot, keep a small spray bottle with you throughout the day.
